Using cases from the authors' files or from case files of other working clinicians, CASEBOOK IN ABNORMAL PSYCHOLOGY, International Edition portrays the rich and arresting nature of disorders manifested in real people. Cases illustrate every major DSM-IV category, followed by a therapy outcome section that tells the "rest of the story" of what happened to these clients. Using an integrative approach, the authors emphasize the multiple causes of disorders and incorporate developmental and cultural issues in each case. Complex cases are presented without a diagnosis, so students can come up with a diagnosis on their own. This Fourth Edition includes a new case on body dysmorphic disorder as well as two new cases without a diagnosis.

Throughout, the authors adopt a biopsycosocial perspective in integrating material from diverse areas of research in a highly accessible manner. Importantly each chapter has been written by specialists working in the Australian and New Zealand context so as to maximise the relevance and accessibility for Australian readers.

Robert Weis' third edition of Introduction to Abnormal Child and Adolescent Psychology adopts a developmental psychopathology approach to understanding child disorders. Using case studies, this perspective examines the emergence of disorders over time, pays special attention to risk and protective factors that influence developmental processes and trajectories, and examines child psychopathology in the context of normal development. Designed to be flexible via its focused modular organization, the text reflects the latest changes to the DSM (DSM 5, 2013) and is updated with new research and developments in the field.

This textbook provides a comprehensive account of psychology for all those with little or no previous knowledge of the subject. It covers the main areas of psychology, including social psychology, developmental psychology, cognitive psychology, personality, intelligence, and biological psychology.; Each chapter contains definitions of key terms, together with several multiple-choice questions and answers, and semi-structured essay questions. In addition, every chapter contains a "Personal Viewpoint" section, which encourages the reader to compare his or her views on psychology with the relevant findings of psychologists. The last chapter is devoted to study skills, and provides numerous practical hints for readers who want to study more effectively.

Real Science. Real Life. Deborah Beidel, Cynthia Bulik, and Melinda Stanley take a scientist-practitioner-educator approach and help students see and understand the connection between the science and practice of abnormal psychology. This leading-edge author team, consisting of three active researchers, clinicians, and educators, take a scientist-practitioner approach emphasizing the rich blend of both the science and practice of abnormal psychology throughout the text. The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors.
