## ~~Simple Guide on the Classification of Combine Harvesters~~

With regard to wheels in combine harvester power system, combine harvesters are constructed with rubber wheels, which are figured for dry or paddy fields. Standing apart from the front axle and rear axle, the wheels' size depends on combine weight and load, and on maximum allowable pressure on the soil as well.

**Theory of Operation:** The ProDrive hydrostatic motor has a higher displacement than the previous hydrostatic systems. Both the pump and motor are variable-displacement components that allow ProDrive to maintain high levels of torque to the ground throughout each of the two operating-speed ranges. Range one can be set for typical harvesting speeds.
