Ironclad | ship | Britannica

An ironclad was a steam-propelled warship in the early part of the second half of the 19th century, protected by iron or steel armour plates. The term battleship was not used by the Admiralty until the early 1880s, with the construction of the Colossus class. Prior to this point, a wide range of descriptions were used.

oceangoing ironclad, France had a warship that could sink any other, and which was proof against the guns of any wooden ship afloat. Instantly, an arms race began between the great navies of Europe – first to build their own ironclads, and then to surpass each other's technology and designs. As both armour and gun technology rapidly improved, naval architects found new ways to mount and protect guns. The ram briefly came back into fashion, and Italian and Austro-Hungarian fleets fought the ironclad era's great battle at Lissa. By the end of this revolutionary period, the modern battleship was becoming recognizable, and new naval powers were emerging to dominate Europe's waters.

Battle of the Ironclads brings to life the dramatic events which occurred in Hampton Roads on March 8 and 9, 1862. This first

battle between armored vessels, often called the Monitor-Merrimack engagement, is perhaps the most significant naval event of the entire Civil War. This thrilling history is the first volume to offer a comprehensive pictorial interpretation of the men and ships that forever changed naval warfare. Over 150 images, including photographs, engravings, paintings, and sketches, have been gathered from museums, archives, and private collections to chronicle the exciting story of the U.S.S. Monitor and the C.S.S. Virginia (Merrimack). While Battle of the Ironclads is a visual history of the first battle between armored ships, it is also a saga of uncommon valor and leadership epitomized by Franklin Buchanan, George U. Morris, Samuel Dana Greene, and John Taylor Wood. The brilliant innovations of John Mercer Brooke and the farsighted inventions of John Ericsson made this showdown in Hampton

? Hampered by lack of materials, shipyards and experienced shipbuilders, even so the South managed to construct 34 iron-armored warships during the Civil War, of which the Confederate Navy put 25 into service. The stories of these vessels illustrate the hardships under which the Navy operated--and also its resourcefulness. Except for the Albemarle, no Confederate ironclad was sunk or destroyed by enemy action. Overtaken by events on the ground, most were destroyed by their own crews to prevent them from falling into Union hands. This account covers the design and construction and the engagements of the Confederate ironclads and describes the ingenuity and courage, as well as the challenges and frustrations of their "too little, too late" service.

A description of the construction, battles, and historical impact of

the Civil War battleships, the Monitor and the Virginia, known to Union forces as the Monitor and the Merrimack, focuses on the Battle of Hampton Roads, where it was evident that the age of wooden warships was gone forever. Reprint.

Honorable Mention, Science and Technology category, John Lyman Book Awards, North American Society for Oceanic History Civil War Ironclads supplies the first comprehensive study of one of the most ambitious programs in the history of naval shipbuilding. In constructing its new fleet of ironclads, William H. Roberts explains, the U.S. Navy faced the enormous engineering challenges of a largely experimental technology. In addition, it had to manage a ship acquisition program of unprecedented size and complexity. To meet these challenges, the Navy established a "project office" that

was virtually independent of the existing administrative system. The office spearheaded efforts to broaden the naval industrial base and develop a marine fleet of ironclads by granting shipbuilding contracts to inland firms. Under the intense pressure of a wartime economy, it learned to support its high-technology vessels while incorporating the lessons of combat. But neither the broadened industrial base nor the advanced management system survived the return of peace. Cost overruns, delays, and technical blunders discredited the embryonic project office, while capital starvation and never-ending design changes crippled or ruined almost every major builder of ironclads. When Navy contracts evaporated, so did the shipyards. Contrary to widespread belief, Roberts concludes, the ironclad program set Navy shipbuilding back a generation.

Read PDF Ironclads

In November 1859, the French warship *La Gloire* was launched. She was the world's first seagoing ironclad - a warship built from wood, but whose hull was clad in a protective layer of iron plate. Britain, not to be outdone, launched her own ironclad the following year - *HMS Warrior* - which, when she entered service, became the most powerful warship in the world. Just like the *Dreadnought* half a century later, this ship changed the nature of naval warfare forever, and sparked a frantic arms race. The elegant but powerful *Warrior* embodied the technological advances of the early Victorian era, and the spirit of this new age of steam, iron and firepower. Fully illustrated with detailed cutaway artwork, this book covers the British ironclad from its inception and emergence in 1860, to 1875, a watershed year, which saw the building of a new generation of recognisably modern turreted battleships.

Read PDF Ironclads

Civil War expert Robert MacBride charts the history of the ironclads of the Civil War, heavily illustrated with plans and diagrams. The battle between the USS Monitor and the CSS Virginia (nee Merrimack), at Hampton Roads was neither the beginning nor the end of the story of the ironclad warships in the Civil War. Both the Union and the Confederate navies not only had other ironclad ships in commission at the time of the battle, they already had used them in combat. The months following saw the appearance of squadrons of monitors and casemate ironclads of the general design of the Virginia. It is with the sequels to the Battle of Hampton Roads that this book is primarily concerned.

Confederate ironclad the CSS Virginia, formerly known as the Merrimack, sank two Union wooden warships, proving the power of the armored vessels over the traditional sailing ships. The next morning, the Virginia engaged the Union ironclad USS Monitor to a draw in a battle that significantly altered naval warfare. It was the first engagement between ironclads and ushered in a new era of warship construction and ordnance. The 25, 000 sailors, soldiers and civilians who witnessed the battle knew then what history would soon confirm: wars waged on the waters would never be the same. The seemingly invincible Monitor and Virginia were experimental ships, revolutionary combinations of new and old technology, and their clash on March 9, 1862, was the culmination of over 2, 000 years of naval experience. The construction and combat service of ironclads during the Civil War were the first in a
