Liferay Portal Setup Guide
Introduction to Installation and Setup Liferay Portal is one of the most flexible applications on the market today with regard to application server environments. You can install Liferay Portal on everything from a shared Tomcat installation to a multi-node cluster running a commercial application server and on everything in between.

Introduction to Installation and Setup—**Liferay Help Center**—
Liferay also scales very well: you can install Liferay Portal on everything from a shared hosting account to a multi-node cluster running a commercial application server and on everything in between. In fact, Liferay is used successfully in all of these scenarios every day.

Introduction to Installation and Setup—**Liferay Help Center**—
You need to instruct Liferay to use MySQL instead of HSQLDB (default) database. For this, just create one file called portal-ext.properties just under the Liferay server 's extracted folder in the previous step. Add the following content to portal-ext.properties file.

Liferay 7 installation—**A step-by-step guide**—**Tech blog**
Before you get any further you should set your site name. When you start a new Liferay bundle for the first time, it creates a site with a single "Welcome" page. The default name for the Site is "Liferay," but you can change that by changing the name globally. You can set the name through the Setup Wizard or through the Control Panel.

Initial Setup—**Liferay Help Center**—
If you 're a Liferay veteran and you already have your database information and various properties set up, you can skip the wizard by adding this line to your portal-ext.properties file: setup.wizard.enabled=false Tip: In Liferay 6.1 GA2 (both 6.1.1 CE and 6.1.20 EE), the admin user test@liferay.com is created by the setup wizard even when a different user is specified. This means that two admin users are created: test@liferay.com and the specified user.

Using Liferay's Setup Wizard—**Liferay Help Center**—
Portal: Congratulations, you are done with liferay portal setup. "Sign In" using "username / password" as default "test@liferay.com / test" admin user. On first login, it asks for Just start playing with out-of-box features of liferay portal as per user guide. on given page (i.e. Add -> Search "Blogs" -> Click

Liferay Portal 7—**Getting Started Guide**—**Liferay Portal**—
Note that property values in portal-setup-wizard.properties (the file the setup wizards creates in Liferay Home) override property values in portal-ext.properties. On finishing basic configuration, Liferay DXP prompts you to restart your server. When you restart your application server, Liferay DXP initializes the database you specified. Now that Liferay DXP is up and running, you can continue configuring it as desired. Here are some suggestions:

Installing Liferay DXP—**Liferay Help Center**—
Liferay Portal needs to have the Liferay Portal Dependency JARs, an appropriate JDBC driver and a few other JARs installed. Create folder \$TOMCAT_HOME/lib/ext. Extract the Liferay dependencies file to \$TOMCAT_HOME/lib/ext. If the files do not extract to this directory, you can copy the dependencies archive to this directory, extract them and then delete the archive.

Installing Liferay on Tomcat 7—**Liferay Help Center**—
Build your project on the community supported Liferay Portal CE which is designed for smaller, non-critical deployments and contributing to Liferay development. Liferay Commerce Build your commerce project with a suite of B2B and B2C features built from the ground up.

Download Liferay Portal CE or Commerce
If you 're setting up Liferay to be an actual server, copy your database 's JDBC driver .jar to [Tomcat]/lib/ext (see the setup wizard section below). If you 're setting up Liferay for demo purposes, you can skip this step. Start Tomcat in the same way as you would if you had downloaded it manually.
