This book provides insights into waste management practices in developing countries, and the application of research and innovation in finding appropriate solutions to improved waste management. The chapters have been selected with a focus on organic waste beneficiation, a significant waste stream in developing countries; the role of government and associated policy interventions; citizen behaviour in support of greater waste recycling; and the safe management of hazardous waste, particularly healthcare risk waste.

The book has been prepared by authors from different international organizations – including FAO, IFPRI, UNCTAD and ECLAC, as well as legislators and academics from prestigious Latin American universities – seeking to foster reflections for the Global Food Systems Summit, to be held in September 2021. It contextualizes the region ' s food systems within a post COVID-19 pandemic scenario and raises new challenges (and opportunities) for policy makers, decision makers, the private

sector, and the general public. Likewise, it offers important reflections on sustainability, from production to consumption, with the call to promote better governance of the global and regional food system. In order to face what some authors have deemed “ the Syndemic of the century ” , the participation of companies, research centres, academia, NGOs, government agencies and international organizations will be necessary.

In this classic text and professional resource, leading geographers and urban planners present the foundational concepts and methodological tools that readers need to understand and engage with today's pressing policy issues. Covered are such key topics as passenger and freight dynamics in the American metropolis; the urban transportation planning process, including the use of GIS; and questions related to public transit, land use, energy, equity, environmental impacts, and more. The book features more than 100 maps, charts, and photographs.

Manufacturing a product is not difficult, the difficulty consists in manufacturing a product of high quality, at a low cost and rapidly. Drastic technological advances are changing global markets very rapidly. In such conditions the ability to compete successfully must be based on innovative ideas and new products which has to be of high quality yet low in price. One way to achieve these objectives would be through massive investments in research of computer based technology and by applying the approaches presented in this book. The First International Conference on Advanced Manufacturing Systems and Technology AMST87 was held in Opatija (Croatia) in October 1987. The Second International Conference on Advanced Manufacturing Systems and Technology AMSV90 was held in Trento (Italy) in June 1990. The Third, Fourth, Fifth and Sixth Conferences on Advanced Manufacturing Systems and Technology were all held in Udine (Italy) as follows: AMST93 in April 1993, AMST96 in September 1996, AMST99 in June 1999 and AMST02 in June 2002.

Are MOOCs a catalyst for reimagining education, a sign of the increased corporatization of the education sector, or merely a well-publicized but passing trend? Massive Open Online Courses shares insights from multiple stakeholders on what MOOCs are now and could eventually become, providing those in higher education as well as K-12, military, government, and corporate training with an authoritative source on a wide range of key issues surrounding MOOCs. MOOCs, or Massive Open Online Courses, are a disruptive technology currently forcing a serious reconceptualization of accreditation, assessment, motivation and retention, technology-based instruction, and the overall student experience. In this timely volume, Paul Kim brings together experts from higher education, business, law, learning analytics and other relevant areas to provide an evenhanded, research-based positioning of MOOCs within the existing educational technology landscape and a base for understanding whether they could reshape the future of education.

grounding in the subject. The two books - Caribbean Challenges and The Caribbean and Beyond - can be used in any of years one, two or three of the lower secondary school.

Generally, textbooks on urban geography and urban planning are based on ideas laid out in the west and are unable to explicitly connect those ideas to the way Indians experience their cities. This gap is addressed in this book by reconceptualising Indian urban studies. The reconceptualisation is done by dissecting western theories, concepts, paradigms, and principles and practices, and placing them alongside how Indians experience their urban landscapes. Such a comparative analysis allows readers to break from their past understandings of the structure and dynamics of Indian cities as well as enable researchers to make exploratory hypotheses. The book will empower students to craft and implement new approaches, unconstrained by orthodox theories and biases. Primarily intended for the students of Geography and Urban Planning, the book covers the evolution of urban structures and dynamics of settlements in India, largely after India's Independence. There are seven chapters in the book. First three chapters describe and explain the evolution of Indian settlements up to the present. The next four chapters focus on regions, urban planning, urban governance and the social landscape of Indian cities. Each chapter ends with a set of short and long answer questions. KEY FEATURES Large coverage of the syllabi prescribed in Indian academic institutions Strategically organised text of each chapter for the ease of learning Abundant case studies in each chapter Chapter-end short-answer, long-answer and fill-in the blank type exercise problems Target Audience B.Arch BA/B.Sc (Geography) MA/M.Sc (Geography)

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible
