work epitomizes this definition, as he argues that “conflict” is composed of four parts: (1) antecedent conditions (those creating the possibility for disagreement between actors, like resource shortages); (2) emotions (what he calls “affective states,” such as stress and hostility); (3) perceptions of the situation; and (4) behavior (e.g., overt coercive violence, such as militarized behavior).

Conflict isn't necessarily a bad thing — even when it happens in the workplace. For instance, productive conflict yields heightened creativity and a more cohesive team dynamic. The human response to conflict makes it either a constructive or destructive force, but the force itself is neutral.

This volume presents an innovative new analytical framework for understanding the dynamics of violent conflict and its impact on people and communities living in contexts of violence. Bringing together the findings of MICROCON, an influential five year research programme funded by the European Commission, this book provides readers with the most current and comprehensive evidence available on violent conflict from a micro-level perspective. MICROCON was the largest programme on conflict

analysis in Europe from 2007-2011, and its policy outreach has helped to influence EU development policy, and supported policy capacity in many conflict-affected countries. Whilst traditional studies into conflict have been through an international /regional lens with the state as the primary unit of analysis, the micro-level perspective offered by this volume places the individuals, households, groups and communities affected by conflict at the centre of analysis. Studying how people behave in groups and communities; and how they interact with the formal and informal institutions that manage local tensions, is crucial to understanding the conflict cycle.

These micro-foundations therefore provide a more in-depth analysis of the causes and consequences of violent conflict. By challenging the ways we think about conflict, this book bridges the gap in evidence, allowing for more specific and accurate policy interventions for conflict resolution and development processes to help reduce poverty in the lives of those affected by conflict. This volume is divided into four parts. Part I introduces the conceptual framework of MICROCON. Part II focuses on individual and group motivations in conflict processes. Part III highlights the micro-level consequences of violent conflict. The final section of this volume focuses on policy implications and

Endowed with natural resources, majestic bodies of fresh water, and a relatively mild climate, the Great Lakes region of Central Africa has also been the site of some of the world's bloodiest atrocities. In Rwanda, Burundi, and the Congo-Kinshasa, decades of colonial subjugation—most infamously under Belgium's Leopold II—were followed by decades of civil warfare that spilled into neighboring countries. When these conflicts lead to horrors such as the 1994

Rwandan genocide, ethnic difference and postcolonial legacies are commonly blamed, but, with so much at stake, such simple explanations cannot take the place of detailed, dispassionate analysis. The Dynamics of Violence in Central Africa provides a thorough exploration of the contemporary crises in the region. By focusing on the historical and social forces behind the cycles of bloodshed in Rwanda, Burundi, and the Congo-Kinshasa, René Lemarchand challenges much of the conventional wisdom about the roots of civil strife in former Belgian Africa. He offers telling insights into the appalling cycle of genocidal violence, ethnic strife, and civil war that has made the

Great Lakes region of Central Africa the most violent on the continent, and he sheds new light on the dynamics of conflict in the region. Building on a full career of scholarship and fieldwork, Lemarchand's analysis breaks new ground in our understanding of the complex historical forces that continue to shape the destinies of one of Africa's most important regions.

Prisons are dangerous places, and assaults, threats, theft and verbal abuse are pervasive - attributable both to the characteristics of the captive population and to an institutional sub culture which promotes violence as a means of resolving conflicts. Yet the crimes perpetrated by prisoners on other

prisoners have attracted little interest, and criminological research has contributed little to an understanding of situations in which violence arises in penal institutions. This book seeks to remedy this, and to address and answer a number of key questions: how do features of the prison social setting shape conflicts?; what social norms guide the decision to use violence?; what are the personal and social consequences of spending months or years in places where distrust and anxiety are normal?; how do staff respond to the dangers that are part of daily life in many prisons?; is it possible to identify factors associated with risk and resilience?; and what methods of

handling conflicts do prisoners use that could prevent violence? Prison Violence adopts a distinctive approach to answering these questions, and is based on extensive research, including interviews with both victims and perpetrators of prison violence; it pioneers a conflict-centred approach, seeking to understand the pathways into and out of situations where there is potential for violence, focusing on interpersonal and institutional dynamics rather than on individual psychological factors.

area. The book suggests a new framework for understanding conflict as a particular form of situation, interaction and tension. It shows how conflicts are shaped by varied dynamics relating to emotion, securitization, incentives, digital technology and violence; even attempts at monitoring, resolving or remembering conflicts may end up contributing to their escalation or continuation. Split into two sections, the first part focuses on the question of why and how conflicts escalate, while the second part analyses the continuation of conflict. The book features several case studies of conflict escalation and continuation - in Bahrain, Israel-Palestine, South Sudan, Northern

examine the evolving nature of violence in intrastate conflicts, as well as the governments and groups involved, by focusing on the context of the relationships involved, the capacities of the conflict's participants, and the actors' goals. The authors first present a theoretical framework through which the changeable mix of relative group capacities and the resulting tactical decisions can be examined systematically and as conflicts evolve over time. They then apply that framework to the six case studies to show its usefulness in better understanding conflicts individually and in comparison. While previous research on civil wars has tended to focus on

Dynamics takes a more comprehensive approach to understanding conflict behavior. The shifting nature of relative group capacity (measured in many different ways), coupled with dynamic group goals, determines the tactical decisions of civil war actors and the paths a rebellion will take. The case studies illustrate the relevance of third parties to this process and how their interventions can influence tactics. The progression of violence in conflicts is inextricably linked to the decisions made in their midst. These influence future iterations of the conflictual relationship. Complex groups on both sides both drive and are driven by the

decisions made. Understanding conflicts requires that these reciprocal impacts be considered. The comparative framework demonstrated in this book allows one to flesh out this complexity.
